Abstracts

The global automotive safety domain control unit market is anticipated to witness a growth of steady CAGR in the forecast period, 2024-2028. Implementation of strict safety regulations and standards by leading authorities in automobiles to prevent the occurrence of road accidents and the booming automotive industry are the major factors driving the growth of the global automotive safety domain control unit market.

Automotive safety domain control unit multi-core microcontroller is suitable for integrating complex passive and active features. Rapid changes and the adoption of innovative solutions by the automotive industry are making the safety domain control unit manufacturers upgrade and increase its compatibility according to requirements. It offers a variety of integration and flexibility options and contains high bandwidth interfaces for required data exchange as an electronic node of the vehicle network. The safety domain control unit is adaptable to customer-specific requirements. It provides an integration platform for additional safety features such as vehicle dynamics sensing (sensor cluster), pedestrian protection, active rollover sensing, pedestrian protection, and crash impact sound sensing. Increase In Safety Concern Supports Market Growth

The rise in the number of road accidents happening all around the globe and the number of people dying or facing critical injuries due to these road accidents is making

automotive manufacturers integrate safety features in automobiles. Several leading authorities have imposed strict safety guidelines and regulations, which have accelerated the adoption of safety features in automobiles to lower the chances of road accidents and enhance the safety of passengers. Market players are investing heavily in research and development activities to integrate safety features in automobiles and upgrade automobiles' existing safety infrastructure, which is expected to create lucrative opportunities for the global automotive safety domain control unit market growth. The automotive safety domain control unit market is a highly advanced product that ensures the efficiency and economic safety of automobiles. With growing sales of automobiles across the globe, the market is expected to grow in the forecast period.

Increasing Demand for Autonomous Vehicle Boosts Market Growth

The ongoing technological advancements in the automotive industry and the changing preference of automobile manufacturers to adopt technology that enhances consumers' safety, comfort, and convenience is witnessing huge demand. In 2020, over a million vehicles comprising level 1, level 2, and level 3 automation were sold worldwide. High sales of autonomous vehicles due to increased expenditure capacity of consumers, rapid urbanization, and development of advanced transportation infrastructure are fueling the sales of the automotive safety domain control unit market across the globe. Autonomous vehicles need the installation of a safety domain control unit to experience and provide attractive features to passengers such as path planning, decision-making and control, high-speed communication capability, localization multi-sensor fusion ability, and other features. These also provide interfaces for several radars, cameras, LiDAR, IMU, etc. The ability of the automotive safety domain control unit market to improve vehicle performance and safety is contributing to increasing their sales worldwide. The United States is a potential market as they have a well-developed technological infrastructure and the presence of a large number of market players in the country.

Market Segmentation

The global automotive safety domain control unit market is segmented by vehicle type, demand category, domain, regional distribution, and company. Based on the vehicle type, the global automotive safety domain control unit market is divided into passenger car and commercial vehicle. Based on the demand category, the global automotive safety domain control unit market is divided into OEM and replacement. Based on domain, the global automotive safety domain control unit market is divided into infotainment, driver information, camera/driver monitor and others. To analyze the

market based on the region, the global automotive safety domain control unit market is studied in major regions namely North America, Asia-pacific, Europe & CIS, South America, Middle East, and Africa.

Market Players

Visteon Corporation, Continental AG, Robert Bosch GmbH, Veoneer Inc., ZF Friedrichshafen AG, Aptiv PLC, are among the major market players in the global platform that lead the market growth of the global automotive safety domain control unit market.

Report Scope:

In this report, global automotive safety domain control unit market has been segmented into following categories, in addition to the industry trends which have also been detailed below:

Automotive Safety Domain Control Unit Market, By Vehicle Type:

Passenger Car

Commercial Vehicle

Automotive Safety Domain Control Unit Market, By Demand Category:

OEM

Replacement

Automotive Safety Domain Control Unit Market, By Domain:

Infotainment

Driver Information

Camera/Driver Monitor

Others
