## Abstracts

China Ethanol Derivative demand stood at 2301.9 Thousand Tonnes in 2020 and is forecast to reach 3959.98 Thousand Tonnes by 2030, growing at a healthy CAGR of 5.60% until 2030. China is the largest energy user in the World. The country uses several policy measures to promote the rapid expansion of national ethanol production and related downstream industries. In China, ethanol is majorly produced from grains of China E10 target, i.e., blending 10% ethanol with fuel will increase the production of ethanol and its derivatives. Also, the growing automotive industry in the country will propel the demand from the Paint & Coating industry for the forecasted period. Due to the outbreak of COVID-19 in 2020, the world economy was disrupted. The market was affected drastically, and production and manufacturing units were shut down.

Furthermore, the major market players intentionally halted the production keeping their employee's health and wellness in mind. With imposed new regulations of the COVID-19 and proper precautions, the market is anticipated to regain its growth in the years to come. The pandemic is slowly being subsided and the effects are tried to be overcome by various methods. Once the market regains the full function of its production unit, the market is bound to show robust growth in the forecast period.
