## Abstracts

China's Hydrogen Peroxide demand stood at 362.75 Thousand Tonnes in 2020 and is forecast to reach 653.78 Thousand Tonnes by 2030, growing at a healthy CAGR of 5.95% until 2030. The most important use of Hydrogen Peroxide in the country has been mainly as a bleaching agent in the textile and pulp industry. Being an eco-friendly oxidant, the growing investments across the downstream sectors and technological innovation towards its industrial manufacturing would stimulate market growth in the forecast period. Being the epicenter of the COVID-19 viral infection spread, China is still devoted to finding the cure to the infection. Hydrogen peroxide is an antiseptic and maintains the hygiene of the infrastructure when incorporated in disinfectants. The market was affected drastically, and production units shut down. Also, the major market players intentionally halted the production keeping the employees' health and wellness in mind. With imposed new regulations of the COVID-19 and proper precautions, the market would regain its growth in the years to come. The pandemic is slowly subsiding, and the market may gain its growth rate soon enough. Once the market regains the full function of its production unit, the market is bound to show robust growth in the forecast period.
