Abstracts

China LPG industry stood at 53.39 Million Tonnes in 2020 and is forecast to reach 84.45 Million Tonnes by 2030, growing at a healthy CAGR of 4.40% until 2030. China is one of the world's largest consumers of global LPG. The rise in the initiatives taken by the leading authorities to provide incentives, start-up subsidies, and distribution licenses to promote increased consumption and usage of LPG fuels especially in the transport sector would accelerate the market growth in the forecast period. Northern and eastern coastal regions of China typically have relatively high LPG penetration due to growing demand from transport and nascent petrochemical sectors. The COVID-19 pandemic which affected the economy adversely led to the temporary shutdown of end-user industries thereby declining the demand from the commercial sectors. However, due to lockdown restrictions, the demand for residential sectors accelerated which boosted the market growth in this period.
