Segmental Insights

Application Insights

The packaging industry sees vast scope for implementing digital printing. Different packaging methods and technologies to cater to varying product demands for specific types of branding deploy different printing technologies. Some packaging industries include cartons, labels, metal packaging, rigid plastic packaging, corrugated packaging, and flexible packaging. Packaging Segment Expected to Witness Significant Growth. Folding cartons, flexible packaging, and label printing are the three packaging applications that require printing and cutting, with folding cartons adding a few more processes to the file preparation (structural CAD files) and finishing (die-cutting, folding, gluing).

With a rise in the digital delivery of information, Digital printers have been observed to be imbibing digital technologies to enhance packaging print quality. Quick response (QR) codes have become a basic/mainstreamed print on Application packaging to be scanned with a smartphone for additional display of data, such as Application info and promotional content.

Additionally, the demand for printing from packaging and labels for pharmaceuticals, tobacco products, and alcoholic beverages is expected to increase, as the companies must comply with dynamic government regulations and protect against counterfeiting.

Regional Insights

Asia Pacific plays a significant role in the global Digital Printing market. The packaging industry sees vast scope for implementing digital printing. Different packaging methods and technologies to cater to varying product demands for specific types of branding deploy different printing technologies. Some packaging industries include cartons, labels, metal packaging, rigid plastic packaging, corrugated packaging, and flexible packaging. Corrugated boxes and display making have been at the forefront of digital in

the converting sectors. Digital printing can replace the litho or flexo for either pre-print or post-print production, although each requires different configurations. The past decade witnessed the advancement in high-speed single-pass inkjet presses with robust sheet feeders for much higher throughputs than flatbeds could ever manage, which could handle thousands of sheets per hour. One advantage of large inkjets is that they can be much larger than even the largest litho press. Boxes for the most prominent retail goods, such as big televisions, lawnmowers, and so on, might need two or more litho sheets to be laminated to cover the whole area. However, a prominent digital press can do it in one. Vendors are increasing their production capacity by investing in the digital press to remain competitive in the market studied. For instance, in April 2022, corrugated converting business Complete Design & Packaging (CDP) doubled its investment in the single-pass inkjet digital print technology that has helped make it an industry innovation and growth player. The Concord, N.C.-based company is installing its second ultra-high-speed Nozomi direct-to-corrugated solution from Electronics For Imaging, Inc.– a new EFI Nozomi 14000 LED digital press.
