Abstracts

Europe Bisphenol S demand stood at 0.02 Million Tonnes in 2020 and is forecast to reach 0.148 Million Tonnes by 2030, growing at a healthy CAGR of 20.19% until 2030. Bisphenol S is an organic compound, which is considered less harmful than Bisphenol A and therefore finds diverse applications across various end-user industries. Thermal paper being the major end-use of Bisphenol S is experiencing expansion in manufacturing facilities and commercial spaces in Europe. Besides, increasing construction activities have further proliferated the consumption of Bisphenol S in the production of epoxy resins among European countries. Moreover, rising government support for the adoption of Bisphenol S due to its less environmental impact is escalating its demand in the region. However, high prices of Bisphenol S are pushing the companies to develop bisphenol-free products, which might negatively influence the Bisphenol S market in the long term outlook. The COVID-19 pandemic caused a major economic disruption in the region, which led to a significant decline in the adoption of Bisphenol S. However, as the commercial and industrialization activities are gaining momentum in the region due to ease down of lockdown restrictions, the Europe Bisphenol S market is set to grow at a formidable rate during the forecast period.
