Abstracts

Europe Ethylene Vinyl Acetate (EVA) demand stood at 0.56 Million Tonnes in 2020 and is forecast to reach 0.807 Million Tonnes by 2030, growing at a healthy CAGR of 3.91% until 2030. The demand for Ethylene Vinyl Acetate (EVA) in Europe is expected to grow at an accelerating pace due to rising demand for the chemical in the Packaging and Renewable Energy Industry. Europe region remains dominant in the applications of EVA in Solar cell and module manufacturing in comparison to Asia and North America. Owing to its high elasticity and adhesive properties, the chemical is extensively used in footwear and packaging applications, which is further propelling the market for EVA during the forecast period. Like every other industry, the COVID-19 had a significant impact on the chemical sector as well. Disruptions caused by the pandemic in supply chains, limited mobility of goods and personnel, and shutting down of manufacturing units for non-essential items led to the decline in demand for EVA in the region. However, with an increase in construction and commercial activities in the region, the Europe EVA market is expected to bounce back and grow at a formidable rate during the forecast period.
