Abstracts

Europe LPG demand stood at 39.87 Million Tonnes in 2020 and is forecast to reach 69.89 Million Tonnes by 2030, growing at a healthy CAGR of 5.89% until 2030. The increasing application of LPG in the aviation industry and European households for domestic cooking purposes is contributing to the significant growth of LPG in the region. Besides, there has been a rising trend of shifting to cleaner fuels in the developed nations. Therefore, the energy-driven sectors are replacing LPG with conventional fuels for putting less stress on the environment by reducing carbon footprint. Also, huge investments across the petrochemicals sector to incorporate LPG for manufacturing operations are propelling the growth of the Europe LPG market.

The COVID-19 pandemic led to a significant decline in demand for LPG in Europe due to limited mobility of goods and personnel, a temporary ban on manufacturing facilities of non-essential items, and fewer commercial activities. But, the LPG demand has been reinstated in the region as travel and commercial sectors are gaining momentum. In the coming years, the growing inclination of industries towards cleaner fuels is likely to impact the Europe LPG market.
