## Abstracts

Europe Phenol demand stood at 2.73 Million Tonnes in 2020 and is forecast to reach 3.96 Million Tonnes by 2030, growing at a healthy CAGR of 3.9% until 2030. A large market share of the European Phenol market is being utilized in the manufacturing bisphenol A (BPA), a key component of Phenol used across several industries such as automotive, OEM, construction, and home appliances. Epoxy resins, another derivative of Phenol are primarily used in the manufacturing of adhesives and laminates, which are adding to the Europe Phenol market. Other primary uses for phenol include the manufacturing of polycarbonate, caprolactam, and alkylphenols, aniline, and adipic acid. New technological modifications and rising investments across industries for ensuring better Phenol yield are supporting the growth of the Europe Phenol market.

The COVID-19 pandemic had a negative impact on the Europe Phenol market as manufacturing units closed down, infrastructural activities stopped due to temporary restrictions on construction, and a decrease in personal disposable income due to lost jobs. However, the Europe Phenol market successfully recovered with the gradual expansion of commercial activities, rapid demand for automobiles, and production of various phenol derivatives. Europe Phenol market is expected to grow at a significant rate during the forecast period due to rising demand for the chemical in manufacturing units and the increasing urban population.
