## **Abstracts**

France dental bone graft substitute market is expected to register an impressive growth during the forecast period. This can be ascribed to the growing prevalence of periodontal diseases because of poor oral hygiene across the country. Additionally, the growing consumption of tobacco and alcohol and the growing prevalence of various oral diseases can further boost the growth of the market during the forecast period. Moreover, the growing adoption of advanced technology in the healthcare sector has significantly increased, and increasing awareness among the population, especially in the youth, for leading a healthy lifestyle is further expected to increase the demand for the dental bone graft substitute market, thereby fuelling the market growth through 2028. Furthermore, growing demand for developing new products with low cost is further expected to increase the demand for dental bone graft substitutes, thereby

supporting the market growth. The number of dental surgeries performed by dental surgeons in metropolitan France in 2017, by region, was the highest in the region of Ile-de-France, where dentists performed more than 700,000 dental surgery procedures, followed by Centre-Val-de-Loire region with 196,966 surgical procedures.

### Growing Development of Biocompatible Synthetic Bone Grafts

The increasing development of new bone grafting procedures, such as biocompatible synthetic bone grafts, is expected to create lucrative opportunities for growth during the forecast period. The growing incidences of tooth loss have contributed to an increase in bone grafting procedures for repairing them, especially in the developing regions of the country, which is expected to create new prospects for market growth over the next few years. Increasing product commercialization due to growing demand for new products and growing awareness about using new technology can help to enhance the demand for dental bone graft procedures. In 2020, most dentists in France were self-employed. Out of the 42.8 thousand dentists who practiced in France during that year, 37 thousand were self-employed.

### Growing Demand for Dental Implants

Growing advancements in bone graft substitutes have provided better alternatives to bone grafts for patients. Developed regions such as Northern France and Southern France have the presence of innovative product manufacturers in this product space. However, the costs of the products as well as the procedural costs for the hospitals in these regions, are comparatively higher than other regions, which may prove to be the primary driving factor for growth in this market. Furthermore, hospitals are using locally manufactured grafts and substitutes for bone grafting procedures that provide a similar level of performance to that of the globally available commercial bone graft substitutes. So, a large patient pool traveling for bone grafting to France to avail of this procedure will further boost the growth of the market during the forecast period. However, increasing demand for dental bone graft substitutes because of the growing population across the country and the popularity of medical tourism in developing regions is expected to fuel the market growth in the next few years.

### Market Segmentation

France Dental Bone Graft Substitute Market is segmented on the basis of type, material, mechanism, product, application, end-user, and by region. Based on type, the market is further divided into allograft, xenograft, autograft, synthetic bone graft, and
