Abstracts

Geotextiles are permeable fabrics with an ability to separate, filter, reinforce, protect, or drain, when used in association with soil. Typically, they are made from polypropylene or polyester. In India, geotextiles are gaining popularity due to several performance and functional advantages over other materials. Construction and agriculture sectors in India are growing at a robust pace, consequently boosting demand for strong, permeable and flexible geotextile products. Moreover, increasing applications of geotextile products in civil engineering applications such as reinforcement, filtration, separation and production, owing to their excellent performance and comparatively low cost are some of the major factors fueling demand for geotextile products in the country. Growing road construction in the country is one of the major factors expected to aid India geotextiles market during forecast period. Furthermore, growing urbanization, booming population coupled favorable government initiatives are expected to positively influence India geotextiles market during forecast period.
