## **Abstracts**

The demand for Phenol in India reached 311.00 thousand tonnes in FY2021 and is anticipated to grow at around CAGR 5.20% during the forecast period to reach 490.80 thousand tonnes by FY2030. Demand for Phenol in India is likely to grow remarkably in the forecast period driven by strong demand for polycarbonate (PC) in construction, automotive, consumer electronics, and other products. To meet the country's increasing demand for phenolic resins and to reduce the dependence on imports, the phenol industry in India is set to have large capacity additions. Rising demand for Bisphenol A (BPA) from the construction sector with rising investments across the residential and non-residential buildings would further drive the market in the forecast period. India imports around \$600 million worth of phenol every year. The outbreak of COVID-19 in FY2020 disrupted the world economy. The market growth was affected drastically, and production units shut down. Furthermore, the major market players in the country intentionally halted the production keeping their employees' health and wellness in mind. With imposed new regulations of the COVID-19 and proper precautions, the market is anticipated to regain its growth in the years to come. Once the market regains the full function of its production unit, the market is bound to show robust growth in the forecast period. Potential investment in the market is expecting steady growth in the market in the forecast period, until 2030.
