## Abstracts

Styrene-butadiene rubber (SBR) is a synthetic rubber derived from styrene and butadiene. SBR is manufactured by the copolymerisation of monomers of styrene and butadiene by emulsion polymerisation or solution polymerisation process. Owing to properties such as high resistance to abrasion and presence of excellent ageing, SBR is used in the manufacturing of tires. Higher content of styrene in the product enhances its usage for the production of truck tires and other heavyweight tires. Apart from tire manufacturing, styrene-butadiene rubber is also used for polymer modification as it imparts strength and improve mechanical properties of plastics.
