Abstracts

India Submersible Water Pumps Market is anticipated to grow at a robust CAGR during the forecast period.

Submersible pumps, also known as bell pumps, are completely submerged in the water they pump. These pumps are used in flood situations such as groundwater rising in cellars or cellars, flooded boats or flooded areas. Submersible pumps come in a variety of models and differ primarily in the water they pump. For example, a clean water submersible pump is used for rainwater. Other models include submersible or sewage pumps that can handle water containing sand, dirt and debris, or heavy-duty models that can handle coarser materials such as large solid particles. The impeller at the bottom of the pump crushes solid particles and makes them easier to discharge.

Submersible pumps are used in the wastewater industry. They are often used in pump stations and lift stations because they are more compact and cheaper to install than other pumps. When the pump is submerged, it creates a positive liquid pressure at the pump inlet. In this state, less energy is required to move fluid through the path of the pump which increases efficiency. This can be a problem with centrifugal pumps and other types of positive displacement pumps. They are self-priming as they function below the surface of the fluid being pumped so they do not need any priming.

Rise in investments for India Submersible Water Pumps Market is fueling the market growth.

Submersible pumps are submerged in tanks, wells, or other containers. These pumps are designed for submersion. Submersible pumps have the advantage of serving irrigation purposes in agricultural fields. Since it is a self-priming type, it is easy to work under the surface of the pumping medium. As the name suggests, submersible water pumps are designed so that the entire pump and motor assembly is completely submerged in liquid. This type of pump has an airtight motor that is rigidly attached to the pump body. Agriculture plays an important role in India's growing economy. According to IBEF, the sector accounts for 17.8% of the country's gross value added (GVA) and about 54.6% of all workers employed in agriculture and related sectors. From 2021 to 2022, the country recorded total agricultural exports of USD50.2 billion, an increase of 20% from USD41.3 billion in 2020 to 2021. India's agriculture sector is projected to grow by 3.5% in FY23.

Market Segmentation

India Submersible Water Pumps market is segmented into type, mode of operation, end-use. Based on type, the market is bifurcated into borewell, openwell & non-clog. Based on Type, the market is bifurcated into multi-stage & single stage. Based on Battery Type, the market is further bifurcated into Agriculture, Municipal, Industrial, Water & wastewater & Others.

Market player

Major market players in the India Submersible Water Pumps Market are CRI Pumps Private Limited, Kirloskar Brothers Limited, Crompton Greaves Consumer Electrical Ltd., KSB Pumps Limited, La-Gajjar Machineries Pvt. Ltd., Texmo Industries, Plugra Pumps and Motors Pvt Ltd, Shakti Pumps India Limited, Oswal Pumps Ltd., Falcon Pumps Pvt. Ltd.

Report Scope:

In this report, India Submersible Water Pumps Market has been segmented into the following categories, in addition to the industry trends which have also been detailed below:
