Abstracts

Construction chemicals are majorly used in new construction, renovation and repair projects. These chemicals are mixed with construction materials to impart specific functional properties such as quality, strength and chemical resistance to concrete, improve shelf life of civil structures and provide protection from environmental threats. Increasing construction activities due to growing public and private sector investments in infrastructure and real estate construction is forecast to drive demand for construction chemicals in Indonesia during 2017-2026. Moreover, booming tourism industry, rising construction of new healthcare facilities and hospitals, and increasing demand for modern housing facilities are propelling growth in Indonesia construction chemicals market.
