Abstracts

Iran LPG market demand stood at 9.7 Million Tonnes in 2020 and is forecast to reach 13.86 Million Tonnes by 2030, growing at a healthy CAGR of 3.50% until 2030. LPG is a clean and potable fuel primarily obtained as a by-product of the oil-refining process in African refineries. LPG's unique properties make it a reliable energy source, which makes its use as a fuel widely acceptable across several household and commercial sectors. The market growth is being driven by the industry's investments in niche applications using LPG as a potential fuel. The COVID-19 pandemic affected the growth of the LPG market as the demand for LPG from commercial sectors faced a setback. The economy fell owing to the temporary closure of the manufacturing units and the end-user industries. Also, the disruption in the supply chain hindered the growth of the LPG market.
