Abstracts

Japan Bisphenol S demand stood at 2.42 Thousand Tonnes in FY2021 and is forecast to reach 16.41 Thousand Tonnes by FY2030, growing at a healthy CAGR of 23.71% until FY2030. Increasing use of e-commerce and online billing using POS machines has led to rising adoption of thermal paper, which is thereby stimulating the demand for Bisphenol S. Thermal papers are being widely used in the labeling of food and beverages, which is growing at an exponential rate owing to increased consumer inclination towards packaged food items. Bisphenol A demand has gradually decreased in the past five years in Japan due to hazardous health issues associated with it. This has resulted in growth in the demand for Bisphenol S in Japan. Further, the rising construction sector is projected to increase the demand for epoxy resin, which is further propelling the demand for Japan Bisphenol S market. Besides, growing demand for Bisphenol S alternatives such as phenolic resins and polyurethanes across various industries is likely to accelerate its demand in the region. The COVID-19 caused a major disruption in the regional economy due to the closing down of manufacturing units, restricted movement of goods and personnel, and interrupted supply chains. However, with ease down of lockdown restrictions, the commercialization and industrialization activities are increasing, the Japan Bisphenol S market is regaining momentum and is expected to grow at a formidable rate during the forecast period.
