Abstracts

Japan Ethanol derivatives demand stood at 265.17 Thousand Tonnes in FY2021 and is forecast to reach 471.47 Thousand Tonnes by FY2030, growing at a healthy CAGR of 6.60% until FY2030. Japan is the net importer of Ethanol derivatives and primarily imports Ethyl-Tert Butyl Ether (ETBE). The majority of the ETBE is used in biofuels in the country. Japan has developed national strategies and plans related to biofuels regarding the reduction of greenhouse gas (GHG) emissions and energy security. The other end-uses include Paint & Coating, cosmetics, pharmaceuticals, and others. Paint and Coating constitute the major chunk of ethanol derivative demand.

Due to the outbreak of COVID-19 in 2020, the world economy was disrupted. The market was affected drastically, and production and manufacturing units were shut down. Furthermore, the major market players intentionally halted the production keeping their employee's health and wellness in mind. With imposed new regulations of the COVID-19 and proper precautions, the market is anticipated to regain its growth in the years to come. The pandemic is slowly being subsided and the effects are tried to be overcome by various methods. Once the market regains the full function of its production unit, the market is bound to show robust growth in the forecast period.
