Abstracts

The Hydrogen Peroxide industry in Japan stood at 172.28 Thousand Tonnes in FY2021 and is forecast to reach 261.14 Thousand Tonnes by FY2030, growing at a healthy CAGR of 4.73% until FY2030. The market owes its growth to the country's rapid industrialization and urbanization. Hydrogen peroxide is mainly used as a bleaching agent in the textile and pulp industry. It is also a cleansing agent and is an integral ingredient for sanitizers, disinfectant products, etc. Being an eco-friendly oxidant, Japan's growing investments across the downstream sectors and technological innovation towards its industrial manufacturing would stimulate market growth in the forecast period. Due to the outbreak of COVID-19 in FY2020, the world economy was disrupted. The market was affected drastically, and production units shut down. Furthermore, the major market players intentionally halted the production keeping their employees' health and wellness in mind. With imposed new regulations of the COVID-19 and proper precautions, the market is anticipated to regain its growth in the years to come. The pandemic is slowly being subsided and the effects are tried to be overcome by various methods. Once the market regains the full function of its production unit, the market is bound to show robust growth in the forecast period. Due to this reason, the pulp & paper industry did not produce much demand though the healthcare industry and disinfectant and sanitizer sectors had surged the demand for hydrogen peroxide in recent years, and is expected to continue to influence the growth of the market.
