## **Abstracts**

Iso Propyl Alcohol or Isopropanol demand in Mexico stood at 30.04 Thousand Tonnes in 2020 and is forecast to reach 47.86 Thousand Tonnes by 2030, growing at a healthy CAGR of 4.52% until 2030. IPA is a low-cost solvent widely used in the production of derivatives such as methyl isobutyl ketone (MIBK), isopropylamines, etc., and in industries for manufacturing cosmetic and personal-care products, and also in pharmaceutical applications. Furthermore, growing mergers and acquisitions in the country towards strengthening its petrochemicals sector would drive the market growth in the forecast period.

COVID-19 virus spread caused a worldwide pandemic and Mexico was affected by it too. The country's economy was disheveled and manufacturing units for various chemicals in use were shut down too. Although the isopropyl manufacturing units were soon reinstated with all the precaution measures followed. IPA as a solvent in disinfectants and hand sanitizers is widely used and therefore the production units were rolled into action and distribution to the chemical industries for the manufacturing of the end products was started. Due to this sudden surge in the demand the market experienced a sudden rise in sales and it is anticipated to continue with the growth rate in the future too.
