Abstracts

North America Ethylene Vinyl Acetate demand stood at 0.30 Million Tonnes in 2020 and is forecast to reach 0.427 Million Tonnes by 2030, growing at a healthy CAGR of 3.91% until 2030. Growing industrialization and commercial activities in the region are contributing significantly to the North America EVA market growth. EVA-based films and adhesives are relatively better than any other polymer-based adhesives owing to their enhanced flexibility and low sealing temperature therefore, these are widely adopted in the packaging and agriculture Industry. Besides, the growing solar power industry in the region due to the setup of photovoltaic (PV) modules in the solar cells to generate renewable source of energy in the region is likely to propel the demand for EVA in North America. With the onset of Covid-19, the demand for packaged goods increased consequently, which created a high demand for EVA-based adhesives and films. With the rising adoption of eco-friendly packaging materials and various government initiatives to create renewable sources of energy, the demand for EVA chemicals is expected to grow significantly during the forecast period.
