Abstracts

North America LPG demand stood at 33.08 Million Tonnes in 2020 and is forecast to reach 55.93 Million Tonnes by 2030, growing at a healthy CAGR of 4.31% until 2030. The rising demand for LPG in North America is likely to grow significantly in the forecast period due to the growing population and increasing adoption of LPG cylinders for cooking and heating in residential households. Moreover, growing investments from key players across newer applications of the LPG fuel, both on the wholesale and retail chains across various industries, from petrochemicals to marine bunkers is likely to expand the market growth during the forecast period.

Every business faced the wrath of the COVID-19 pandemic, and the energy sector was no exception. The demand for LPG decreased substantially with the closing down of manufacturing units and reduced commercial activities. However, an increase in LPG consumption was observed in household end-use as people used to spend more time at home. With the gradual increase in commercial, transportation, and industrial activities, the demand for LPG is again expanding at a large scale in North America. The rising inclination of industries towards the adoption of cleaner fuel and technologies is likely to contribute to the North America LPG market during the forecast period.
