Abstracts

In 2015, natural gas was the second largest energy source and accounted for 31.50% share in primary energy consumption. United States become a net exporter of LNG in 2016, with nearly 50 BCF of LNG being exported to Brazil, Chile, UAE, China, France and Japan, during January to June 2016. In North America, Canada accounted for 77.40% of total proved oil reserves, while the US garnered 81.9% of total proved gas reserves in 2015, according to BP statistical report. US accounts for around 24.4 TCM of shale gas reserves, followed by Mexico (19.3 TCM) and Canada (11 TCM). US and Canada are the centers of shale gas developments in North America, due to factors like accessible formations and large proven reserves. Moreover, these countries have advanced drilling and fracturing technologies, piping and refining infrastructure, which provides easy access to the markets. Magnitude of upstream exploration and production taking place in North America is anticipated to surge oil & gas pipeline market in North America in the coming years.
