Abstracts

Rising subsea field development activities being undertaken in offshore Gulf of Mexico is one of the major factor driving demand for oil & gas subsea umbilicals, risers and flowlines (SURF) equipment in the region. Through the forecast period, oil & gas companies operating in the region are expected to further explore Gulf of Mexico for oil & gas exploration. Offshore field development activities suffered a short-term setback after BP's oil spill in Gulf of Mexico but is gaining traction. Moreover, to keep a check on the operation, safety rules have been made more stringent for oil & gas exploration and production across the region. Hence, aforementioned factors are anticipated to create huge demand for oil & gas subsea umbilicals, risers and flowlines in North America region during the forecast period.
