Abstracts

The demand for Hydrogen Peroxide in Russia stood at 38.91 Thousand Tonnes in 2020 and is forecast to reach 56.39 Thousand Tonnes by 2030, growing at a healthy CAGR of 3.89% until 2030. Hydrogen Peroxide is a strong oxidizing agent with no associated harmful emissions contrary to other oxidizing agents. Apart from its growing consumption as a bleaching agent in textile and paper mills, hydrogen peroxide is also used to make derivatives such as sodium perborate and sodium percarbonate. These derivatives are utilized for industrial bleaching or oxidizing agents. Driven by its increased consumption across paper processing and textile applications, the demand for Hydrogen Peroxide is likely to spur in the Russian market during the forecast period. Moreover, Russia experienced the COVID-19 impact later than most of the economies of the world. The country surged the demand for hydrogen peroxide to prepare disinfectants and sanitizers on a large scale. It supplied disinfectants and sanitizers to other countries during the pandemic period. When the number of patients increased, the government planned and executed mass sanitization and disinfection procedures thereby supporting the growth of the hydrogen peroxide market in the country.
