Abstracts

Russia's Iso Propyl Alcohol (IPA) demand stood at 38.64 Thousand Tonnes in 2020 and is forecast to reach 55.25 Thousand Tonnes by 2030 while growing at a healthy CAGR of 3.61% until 2030. Owing to the country's rising investment in medical facilities, supported by infrastructural growth the market is anticipated to grow multiple folds in the forecast period. Also, the growing demand for coatings and paints using IPA as a solvent, from the automotive and construction industries will support the market growth prospects in the forecast period. Moreover, the cosmetics and pharmaceuticals sector together hold more than half of the country's total IPA demand.

With the drastic effects on the world economy, COVID-19 affected Russia's economy too. The country observed lockdown and manufacturing units for the various products were shut down to follow the safety norms. Russia soon resumed the production of isopropyl alcohol for use in the end products like hand sanitizers, and disinfectants. Though the cosmetics industry was not working and the demand from the sector was almost nil, pharmaceutical industries put forth huge demands for the isop[ropyl alcohol and the factor confirmed the sudden jump in the CAGR in recent years. The market is anticipated to grow due to these factors in the forecast years.
