Abstracts

The Saudi Arabia Commercial Vehicle Market experiencing significant expansion as demand has increased in recent years.

Commercial vehicles are utilized for the transportation of passengers and commodities. One of the major forces behind a nation's economic progress is the automotive industry. Saudi Arabia is one of the richest nations in the world and the biggest Middle Eastern producer of automobile components. Nearly half of the vehicles sold in that region are from Saudi Arabia. The Saudi Arabian commercial vehicle market is primarily influenced by the expansion of the logistics sector and the number of ongoing infrastructure projects. Furthermore, it is expected that demand will continue to rise as economies recover from global pandemic and international trade activities increase, thereby driving market growth during the forecast period.

The economic collapse in 2020 caused numerous setbacks for the global automotive sector, and the Saudi Arabian automotive industry also suffered. During the first quarter of 2020, the nation's total exports were USD 57.61 billion (SAR 216.1 billion), down 21.9% from Q1 2019. Additionally, the manufacturing sector's gross domestic product (GDP) declined by 12% in 2020 as compared to the year 2019. Sales in the automotive sector fell as a result of slower economic growth. Furthermore, in the post pandemic year, the General Authority of Statistics in Saudi Arabia reported that 2.9% more vehicles were imported into the Kingdom in 2021 than in 2020. With the inclusion of electric commercial vehicles, the market is likely to grow during the forecast period.

Growing automotive industry

In 2020, Saudi Arabia had accounted for over 52% of the vehicles sold in the GCC and 35% in the MENA region. Although the total number of automobiles sold in Saudi Arabia dropped in 2020, it recovered swiftly in 2021 and 2022. Saudi Arabia's automotive sector is primarily supported by the import of automobiles by international OEMs from the United States, Japan, South Korea, Germany, China, and India. Japan, which is home to Toyota, is the largest importer of vehicles into Saudi Arabia, accounting for nearly 30% of all vehicle sales. Thus, the demand for commercial vehicle market is anticipated to fuel the market expansion.

Increasing Logistic Activities in The Region

The growth of the logistics and transportation industries is also greatly aided by digital transformation and e-commerce platforms. The demand for commercial vehicles rises as road transportation, industrialization, and tourism develops. Saudi Arabia is developing 19 logistics service areas worth nearly 29 billion Saudi riyals (USD 7.7 billion) in investment value, according to the country's Transport and Logistics Services. According to a 2022 report from the Saudi financial news portal Argaam, as part of its expansion strategy for aviation, sea, and land transportation, Saudi Arabia is planning to establish 59 logistics zones. In consequence, the demand for commercial vehicles is anticipated to increase in the years to come due to the developments mentioned above.

Increase in Production Capacity

Saudi Arabia is a significant consumer of trucks and cars, all of which are majorly imported. This raises the vehicle's associated cost. Further, due to the pandemic, many nations suspended their import and export operations, which reduced Saudi Arabia's sales of commercial automobiles. Ultimately, the delay in numerous development projects caused Saudi Arabia's commercial vehicle market growth to slow down. To close the gap between supply and demand, Saudi Arabia is planning to produce more than 300,000 vehicles between 2020 and 2030. The country's automotive eco-system is also expected to achieve at least 40% Local Gross Value Add (LGVA). Owing to the aforementioned factors, the Saudi Arabian commercial vehicle market is anticipated to register a notable growth rate during the forecast period.
