Abstracts

Saudi Arabia Facade market is anticipated to register a robust CAGR during the forecast period.

Building facade means one side of the building body, usually the front. It is one of the most important elements of the overall design of the structure as it gives a special architectural treatment. Building facades can have different shapes and sizes. In fact, it is part of the structure that provides an opportunity for the architect to experiment and show his talent and bring his work to life. Facades are not only aesthetically pleasing, but they also play a central role in energy efficiency and the connection between the exterior and interior of a building. Facades help significantly reduce energy costs. The facade minimizes solar radiation, reduces the building's cooling load, and ultimately minimizes energy costs. The facade protects the occupants from wind, rain, extremes of temperature and humidity. Facades are very popular because of their temperature, weather, and corrosion resistance, which have been valuable properties for decades. A good cladding system, as opposed to the traditional system of grilles and transoms, offers a relatively discreet way to achieve building security through proper design and treatment of building openings.

Rise in demand for facade is fueling the growth of the market

When it comes to building construction, energy efficiency is a very important factor and environmental sustainability is an important aspect of any project. A well-structured facade makes the most of natural light and ventilation when needed. Also, many traditional building materials can be used to your advantage. The use of glass facade allows natural light to illuminate the building, reducing the need for artificial lighting. A special development of the glass material also allows the facade to regulate and cool the interior of the building. All in all, you save on heating and electricity bills.

Another advantage of facades is the added strength and durability to the building. Facades can withstand high winds and rain without damaging the exterior. You can also add a layer of protection against the sun. This means that the facade retains its integrity and appearance much longer than conventional building materials. A well-made facade should protect you from temperatures, harsh weather and even corrosion for decades to come.

Another advantage of building facades is the reduction of noise pollution. Outside noise such as construction, traffic, railroad and aircraft noise can be easily vented out with acoustic panels. Perfect for offices and workspaces, this sound barrier will make your building more comfortable and relaxing.

Latest Developments in Saudi Arabia Facade Market

In 2019, UL LLC partnered with Dammam-based GCC Labs to develop the first facade and fire test lab in the Kingdom of Saudi Arabia (KSA) and provide other services.

Red Sea Global (RSG), developer of the world's most ambitious regenerative tourism destination, the Red Sea and AMAALA, has appointed Reem Emirates Saudi to build the facade and roof wrap for the onshore facility at Red Sea International Airport (RSI).

In mid-2022, the Saudi government unveiled a visualization of a 500-meter-tall linear city called The Line that will be built as part of Neom near the Red Sea. Stretching 170 kilometers through northwestern Saudi Arabia, the megastructure will have a mirrored facade 500 meters high and 200 meters wide.

Resistance Against Earthquake

Most glasses are not earthquake resistant and not suitable for earthquake prone countries. Glass can be made earthquake resistant by a very expensive process to ensure the earthquake resistance of a house, but this type of glass is not very

affordable. Glass is a hard and brittle material. This means that it will easily break under sudden pressure.

Market Segmentation

Saudi Arabia Facade market is segmented on the basis of product, type of facade, and building type. Based on product, the market is further bifurcated into ventilated and non-ventilated. Based on type of facade, the market is further divided into steel, panel frame, curtain wall, clay, aluminum composite, and precast concrete. Based on building type, the market is further divided into industrial, residential, commercial.

Market player

Major market players in the Saudi Arabia Facade market are AluFab, Lindner Saudi Arabia LLC, Fateco, Fa?ade Solutions, Almajal Alarabi Group Co., Hilti Saudi Arabia for Construction Tools LLC, The Safa Aluminum Saudi Co, Deema Aluminum & Metal Coating Factory, Meinhardt Group, and Lindner Saudi Co. Ltd.

Report Scope:

In this report, Saudi Arabia Facade Market has been segmented into the following categories, in addition to the industry trends which have also been detailed below:

Saudi Arabia Facade Market, By Product:

Ventilated

Non-Ventilated

Saudi Arabia Facade Market, By Type of Facade:

Steel

Panel Frame

Curtain Wall

Aluminum Composite

Precast Concrete

Saudi Arabia Facade Market, By Building Type:

Industrial

Residential

Commercial

Saudi Arabia Facade Market, By Region:

Makkah

Riyadh

Eastern Province

Rest of Saudi Arabia

Competitive Landscape

Company Profiles: Detailed analysis of the major companies present in the Saudi Arabia Facade market.

Available Customizations:

With the given market data, Tech Sci Research offers customizations according to a company's specific needs. The following customization options are available for the report:
