Abstracts

The demand for Iso Propyl Alcohol (IPA) in Singapore stood at 3.43 Thousand Tonnes in 2020 and is forecast to reach 5.24 Thousand Tonnes by 2030, growing at a healthy CAGR of 4.52% until 2030. The most common end-use of IPA is its use as a low-cost solvent across multi-faceted applications such as antifreeze, lotions, sanitizers, pharmaceuticals, paints and coatings, and cosmetics. Soaring IPA demand from the cosmetics and pharmaceuticals manufacturers further heightened due to increased consumer spending on healthcare and hygiene products.

The consumers splurged over healthcare and hygiene products due to the recently caused pandemic situation. COVID-19 viral infection spread drastically and affected the population and thus the economies in recent years. The viral infection started from Wuhan City in China and affected the whole world. Isopropyl alcohol demand surged in recent years due to its use in sanitizers and disinfectant products.
