Abstracts

South America Phenol demand stood at 0.34 million Tonnes in 2020 and is forecast to reach 0.49 Million Tonnes by 2030, growing at a healthy CAGR of 3.8% until 2030. Phenol is mainly used for the manufacturing of essential chemicals such as Bisphenol A, Epoxy Resins, and Phenolic Resins. The demand for Phenol in South America is likely to grow tremendously during the forecast period on account of the strong demand for Bisphenol A from the automotive and consumer goods sector. Besides, rising investments in infrastructural development activities and increased consumer spending are contributing to the market growth of Phenol in South America. Additionally, increased R&D activities and growing industrialization activities are contributing to the South America Phenol market.

The COVID-19 pandemic resulted in the declined demand for Phenol in South America due to the shutting down of industries, construction activities, and reduced consumer spending on luxury items. However, the South America phenol market is gradually bouncing back with the increase in commercial and infrastructural development activities due to ease in lockdown restrictions in the region.
