Abstracts

Vietnam refrigerator market is expected to grow at a CAGR of 4.12% during the forecast period and reach USD2193.70 million by 2027 owing to increasing modernization and technological advancements. Furthermore, rising urbanization, product innovation, and income are expected to boost the Vietnam refrigerator market during the forecast period.

A refrigerator is a machine utilized for keeping things cold. It comprises a thermally protected compartment and a heat pump that transfers heat from inside to outside to cool it below room temperature. It is utilized to cool food and different items.

Refrigerators are commonly used in homes and businesses to provide a handy and safe way to preserve food. To attract end-users, industry manufacturers are working on introducing a higher level of luxury and new refrigeration products. The top freezer refrigerator type has dominated the market, with most of the market share of around 30% in 2021.

The Consumer appliances market had an excellent performance because of Vietnam's recovery from the global economic downturn. As living standards rose and customers

placed more value on luxury and convenience, the development of more expensive, sophisticated models of refrigerators gave the category new life. During the COVID-19 pandemic, Vietnam saw a surge in demand for refrigerators as consumers were snapping refrigerators to stock up on food to avoid frequent shopping trips to the market.

Rapid Modernization and Advancing Technology is Driving the Market Growth

Customers in Vietnam are upgrading to larger, more expensive refrigerators. The requirement for comfort instigates consumers to upgrade their current appliances to more advanced versions, driving the market demand for refrigerators. Local customers generally accept and appreciate the advancing technology in refrigerators. Consumers are increasingly changing their buying patterns as supermarkets open across the country and become more easily accessible. This has made larger refrigerators necessary for them to stock up on more fresh items as markets are visited less regularly, driving the refrigerators market growth in Vietnam.

Development of Economy and population Growth Driving the Market Growth

The Vietnamese government has introduced several tax incentives to make the country more attractive for foreign investment, including but not limited to preferential tax rates for domestic businesses, such as exemptions from or reductions to import taxes on raw materials and fixed assets, land taxes, etc. The report predicts that the market for home appliances in Vietnam will expand over the forecasted period. On the one hand, the amount of Vietnamese home appliances exported will keep growing. In the meantime, as the economy and population are expanding, so is demand for household appliances including refrigerators in Vietnam's domestic market.

Improving Living Standards with Rising Disposable Income Driving the Market Growth

Earlier, one of the reasons people didn't have refrigerators or other consumer durables products at home was a lack of money. However, at present times, the demand for refrigerators is driven by consumers' desire for comfort, which prompts them to replace their old appliances with more modern models. People are therefore focusing on the development and raising their standards for conveniences that will accommodate them, require less manual labor, and save them time.
