## Abstracts

The anatomic pathology market is projected to grow significantly, reaching an estimated US\$ 14,032.08 million by 2031, up from US\$ 7,252.84 million in 2023. This growth represents a compound annual growth rate (CAGR) of 8.6% from 2023 to 2031.

### Executive Summary and Asia Pacific Anatomic Pathology Market Overview

In the Asia Pacific region, key players in the anatomic pathology market include China, Japan, India, Australia, and South Korea, with additional insights into other countries in the area. The growth of the anatomic pathology market in this region is primarily driven by the increasing prevalence of chronic diseases and the adoption of digital solutions and advanced pathology tools. Countries like Australia and South Korea are expected to present substantial growth opportunities due to their continuously evolving healthcare systems.

### Market Segmentation Analysis

The Asia Pacific anatomic pathology market can be segmented based on products and services, applications, and end users.

1. **Products and Services:** This segment includes services, instruments, and consumables. In 2023, instruments accounted for the largest market share. The services segment is further divided into histopathology and cytopathology, while the instruments segment includes microtomes, cryostats, automatic stainers, tissue processors, and other related tools.

2. Applications: The market is categorized into disease diagnosis, drug discovery and development, among others. The disease diagnosis segment held the largest share in 2023, reflecting the critical role of anatomic pathology in identifying various health conditions.

3. End Users: This segment includes hospitals, research laboratories, diagnostic laboratories, and others. Hospitals represented the largest share of the market in 2023, highlighting their central role in utilizing anatomic pathology services.

### **Market Outlook for Asia Pacific Anatomic Pathology**

Digital pathology is an emerging area within anatomic pathology that leverages digital technologies to enhance data collection and management processes. This innovation minimizes risks associated with specimen handling and has the potential to expedite patient enrollment in clinical trials. Furthermore, digital pathology can significantly reduce the turnaround time from sample collection to results, thereby streamlining the central pathology review process and improving trial efficiency.

The integration of machine learning (ML) and artificial intelligence (AI) into digital pathology is transforming the field by enhancing data analysis and management capabilities. Many anatomic pathology laboratories are increasingly recognizing the advantages of digitization and AI, which are expected to improve diagnostic accuracy, efficiency, and consistency. Recent technological advancements and regulatory approvals are further promoting the digitalization of laboratory operations.

In November 2023, Dedalus Group and IbeX Medical Analytics introduced a comprehensive AI-powered Digital Pathology Solution aimed at cancer diagnostics. This solution facilitates the complete digitization of anatomic pathology laboratories through a next-generation Anatomic Pathology Information System (AIS) and digital pathology solution, utilizing data and AI for improved case prioritization, advanced image analysis, and consistent diagnoses. The growing emphasis on AI integration in anatomic pathology processes is anticipated to be a significant trend that will drive market growth in the coming years.

### **Country Insights in the Asia Pacific Anatomic Pathology Market**

The Asia Pacific anatomic pathology market includes countries such as China, Japan, India, Australia, South Korea, and others. In 2023, China held the largest market share. Cancer has become a major public health issue in China, with the World Health

Organization (WHO) reporting 4.57 million new cancer cases and 3.00 million cancer-related deaths in 2020, the highest globally. This alarming trend has led to a heightened focus on early cancer screening, diagnosis, and treatment.

Over the past two decades, the Chinese government has implemented several large-scale cancer screening initiatives, such as the "Cancer Screening Program in Rural Areas" and the "Cervical Cancer and Breast Cancer Screening Program for Women in Rural Areas." These programs have significantly increased the rate of population-wide screenings for various cancers, contributing to better cancer prevention and control at primary healthcare facilities.

Moreover, China is transitioning from traditional pathological diagnosis methods to digital pathology. According to a 2022 report by the Shanghai Digital Medicine Innovation Center, approximately 40% of surveyed hospitals are either developing or have already established digital pathology systems. Many of these hospitals have invested substantial amounts in these systems, indicating a strong commitment to enhancing their diagnostic capabilities. The report also noted that around 23% of remote clinical consultations utilized digital pathology in 2022, reflecting its growing importance in the healthcare landscape.

### **Key Players in the Asia Pacific Anatomic Pathology Market**

Prominent companies in the anatomic pathology market include F. Hoffmann-La Roche Ltd, Beckman Coulter Inc, Hologic Inc, Agilent Technologies Inc, BioGenex Laboratories Inc, Diapath S.p.A., Bio SB, Merck KGaA, and PHC Holdings Corporation, among others. These companies are pursuing various strategies, including expansion, product innovation, and mergers and acquisitions, to enhance their offerings and increase their market presence.

### **Reason to buy**

Save and reduce time carrying out entry-level research by identifying the growth, size, leading players, and segments in the Asia Pacific anatomic pathology market.

Highlights key business priorities in order to assist companies to realign their business strategies.

The key findings and recommendations highlight crucial progressive industry

trends in Asia Pacific anatomic pathology market, thereby allowing players across the value chain to develop effective long-term strategies.

Develop/modify business expansion plans by using substantial growth offering developed and emerging markets.

Scrutinize in-depth Asia Pacific market trends and outlook coupled with the factors driving the anatomic pathology market, as well as those hindering it.

Enhance the decision-making process by understanding the strategies that underpin security interest with respect to client products, segmentation, pricing, and distribution.
