The Asia Pacific biopharmaceuticals market was valued at US\$ 39.96 billion in 2022 and is expected to reach US\$ 94.13 billion by 2028. It is estimated to register a CAGR of 15.3% from 2022 to 2028.

Accelerated Clinical Trials to Offer Lucrative Opportunities for Asia Pacific Biopharmaceutical Market

Accelerated progress of clinical trials will ultimately result in the development and commercialization of new drugs targeting rare as well as commonly inherited diseases. Blastic plasmacytoid dendritic cell neoplasm (BPDCN) is an aggressive, acute leukemia that has been historically difficult to diagnose. In December 2018, Tagraxofusp became

the first therapy approved for treating BPDCN, which then became the standard care method. During clinical trials, more than 90% of patients who never received any treatment responded to therapy. Amyotrophic lateral sclerosis (ALS) is a progressive neurodegenerative disease that weakens muscles, impacts physical function, and causes irreversible brain and spinal cord damage. To date, only 2 products are approved for slowing the functional decline associated with ALS. The accelerated clinical trials for developing new products targeting ALS are in progress. For example, antisense oligonucleotides (ASOs) have been showing promising results in clinical trials involving patients suffering from ALS. Further, different gene therapy approaches, targeting multiple mutations in patients for both sporadic ALS and familial ALS, are in clinical trials. Thus, clinical trials of an extensive pipeline of biopharmaceuticals are expected to offer lucrative growth opportunities to the Asia Pacific biopharmaceuticals market in the coming years.

Asia Pacific Biopharmaceutical Market Overview

The Asia Pacific biopharmaceuticals market is segmented into China, Japan, India, South Korea, Australia, and the Rest of Asia Pacific. China held the largest share of the market in 2021, and India is expected to exhibit a significant growth in the market. This is due to China's biopharmaceutical industry undergoing a tremendous shift evolving from a generics-focused to a thriving innovation hub. According to the Information Technology & Innovation Foundation (ITIF) report, China has made considerable progress in matching the US in innovation. A decade ago, China was 80% behind the US; however, today, it is just 50% owing to dramatic progress in innovation, technology influx, and favorable state-directed industrial and trade policies.
