The Asia Pacific colostrum market was valued at US\$ 441.75 million in 2023 and is expected to reach US\$ 765.25 million by 2031; it is estimated to register a CAGR of 7.1% from 2023 to 2031.

Technological Advancements in Colostrum Processing Boost Asia Pacific Colostrum Market

Colostrum is significantly used in functional food & beverages, pharmaceuticals & nutraceuticals, animal nutrition, and personal care products through various manufacturing processes. Various technologies are used to preserve and protect the significant bioactive factors in colostrum. Thermal treatment methods and drying methods such as pasteurization and sterilization are commonly used technologies. Moreover, manufacturers are now adopting advanced technologies to develop high nutrient-enriched colostrum. Liposomal technology and nanotechnology are used to prepare colostrum for human consumption with numerous health benefits. Nanotechnology is the study of structures and materials on an ultra-small scale, and it has various applications in many fields, from the dairy industry to medicine. Nanotechnology can detect food pathogens, which ensures the food quality and safety. This technology is increasingly used in the food market due to its advantages, such as improving the shelf life of products, flavor, and texture of foods. Additionally, this technology provides significant advantages to avoid instability problems in preserving colostrum and its bioactive proteins. The stability of colostrum proteins, such as IgG, is

crucial to preserving the bioactive potential of colostrum. Liposomal technology is a commonly used encapsulation method widely preferred in the cosmetic, pharmaceutical, and dairy industries. This advanced technology uses a liposome, a spherical vesicle including at least one lipid bilayer and phospholipids. Liposomes can have surface ligands to ensure the binding of various ligands. Liposomal technology has been used to preserve colostrum and increase its bioavailability for human health. The delivery of colostrum through the body with the reconstituted membrane phospholipids is far more effective than the colostrum without liposomal encapsulation, making the method more advanced than other conventional methods. Thus, technological advancements in colostrum processing are projected to open lucrative growth opportunities in the colostrum market worldwide.

Asia Pacific Colostrum Market Overview

Singapore, Indonesia, Thailand, Malaysia, and New Zealand are among the major countries in the Rest of Asia Pacific colostrum market. The demand for colostrum in these countries is expected to witness significant growth owing to the growing popularity of fortified food and beverages and dietary supplements. Increasing consumer spending in countries such as Singapore and Malaysia owing to consumer shift toward healthy products and rising expenditure on these products are also supporting the market growth. In addition, the growth in the personal care and animal nutrition industries has further contributed to the growth of the colostrum market in the region.
