Abstracts

The Asia Pacific lawn mower market is projected to grow significantly, reaching approximately US\$ 11,038.83 million by 2031, up from US\$ 6,885.13 million in 2024. This growth represents a compound annual growth rate (CAGR) of 7.2% from 2025 to 2031.

Executive Summary and Market Analysis

Countries like Australia, India, and South Korea are poised to experience substantial growth in the lawn mower market, driven by advancements in the landscaping and residential sectors. Rapid urbanization is occurring across many Asia Pacific (APAC) nations, with a notable trend of people relocating to urban and suburban areas. This urban expansion often includes the development of residential properties that feature yards and green spaces, which require regular maintenance. According to the State Council of China, the urbanization rate of its permanent population is expected to rise to around 70% between 2023 and 2028.

As disposable incomes rise, there is an increasing demand for home and garden care products. In countries such as Japan, South Korea, and Singapore, there is a growing trend towards maintaining well-kept lawns and landscaped gardens. Consequently, consumers are investing more in enhancing their outdoor spaces.

Technological advancements by market players in countries like China, Japan, and South Korea are improving efficiency and consumer convenience. Brands such as Nicosail and HOOKII from China are integrating cutting-edge technology into their lawn care products, including AI-powered vision systems and environmentally friendly, fuel-efficient engines.

Strategic Insights

Market Segmentation Analysis

The Asia Pacific lawn mower market can be segmented based on type, category, and end use.

Type: The market is divided into push mowers, robotic mowers, and ride-on mowers. In 2024, ride-on mowers held the largest market share.

Category: The market is further categorized into electric and non-electric (gas-powered) mowers, with non-electric mowers dominating the market in 2024.

End Use: The market is also segmented into residential and commercial uses, with the commercial sector holding a larger share in 2024.

Market Outlook

The Asia Pacific region is witnessing a significant shift in consumer behavior, primarily driven by rising disposable incomes. This economic transformation is positively impacting the lawn mower market, as more consumers can afford advanced lawn care equipment.

In 2024, China's per capita disposable income surpassed 38,000 CNY, reflecting a substantial increase from previous years. This rise in income has led to a greater percentage of the population investing in high-quality lawn care tools, such as electric and robotic mowers, known for their efficiency and eco-friendliness. Similarly, countries like India and South Korea are experiencing increased consumer spending, particularly in urban areas where the demand for residential lawn maintenance is on the rise.

The expanding middle class in these nations is not only adopting advanced lawn care

solutions but is also fueling the growth of the professional landscaping industry. This surge in demand is driving the need for high-quality lawn mowers for both residential and commercial users. In response, manufacturers are launching a diverse range of products, including ride-on and robotic mowers, to cater to the varied needs and preferences of consumers across the region.

Thus, the increase in disposable incomes throughout the APAC region is fostering a wealthier consumer base, leading to greater investments in advanced lawn care equipment. This trend is propelling the lawn mower market towards innovation and growth, as both residential and commercial sectors seek efficient and sustainable lawn maintenance solutions.

Country Insights

The Asia Pacific lawn mower market includes key countries such as China, Japan, South Korea, India, Australia, and others. In 2024, China held the largest market share.

According to the World Bank, China's urban population exceeded 60% in 2021 and is projected to reach 70% by 2030. As urbanization continues, more individuals are migrating from rural areas to urban centers, leading to a shift towards suburban living. Many newly developed suburban areas feature residential properties with lawns, parks, and green spaces that require maintenance, thereby increasing the demand for lawn care equipment. Cities like Shanghai, Beijing, and Shenzhen are experiencing rapid growth, with new suburban developments becoming increasingly common.

The Chinese government is actively promoting eco-city initiatives that emphasize urban greening and sustainable development, further driving the demand for lawn mowers to maintain urban green spaces. As consumers become more environmentally conscious, there is a growing interest in battery-powered and robotic mowers, which are gradually replacing traditional gas-powered models. Companies like Nicosail are incorporating the latest advancements in lawn care technology, offering products with fuel-efficient engines and electric options featuring long-lasting batteries and rapid charging capabilities.

Company Profiles

Key players in the Asia Pacific lawn mower market include Deere & Co, Andreas Stihl AG & Co. KG, Honda Motor Co Ltd, Robert Bosch GmbH, Husqvarna AB, Kubota Corp, Stanley Black & Decker Inc, CHERVON (China) Trading Co., Ltd., The Toro Co,

AriensCo, ECHO INCORPORATED, WORX, Briggs & Stratton, Bad Boy Mowers, and Fiskars Group. These companies are employing various strategies such as expansion, product innovation, and mergers and acquisitions to deliver innovative products to consumers and enhance their market share.
