Abstracts

The Asia Pacific Mesotherapy Market is projected to grow significantly, reaching an estimated US\$ 258.1 million by 2031, up from US\$ 127.3 million in 2024. This growth represents a compound annual growth rate (CAGR) of 10.8% from 2025 to 2031. The market is primarily driven by increasing consumer awareness and demand for aesthetic procedures across major countries in the region, including China, Japan, India, Australia, and South Korea.

China is a key player in the mesotherapy market, characterized by a robust demand for aesthetic treatments. The rising consumer awareness regarding cosmetic procedures is leading to greater adoption of mesotherapy in both public and private healthcare settings. Japan also shows promising growth, supported by its advanced healthcare system and a surge in medical tourism, which is attracting international patients seeking

aesthetic enhancements.

In India, the rapid expansion of the healthcare sector, coupled with increased health expenditures and a growing interest in cosmetic procedures, is driving the demand for mesotherapy. South Korea, known for its innovative aesthetic practices, is expected to experience substantial growth due to the rising popularity of non-invasive cosmetic treatments. Australia and other Asia Pacific nations are also witnessing a shift towards aesthetic enhancements, fueled by better accessibility and heightened awareness of cosmetic options.

The Asia Pacific mesotherapy market can be segmented by product type, indication, end user, route of administration, and gender. By product type, the market includes Mesotherapy Solutions Kits, Mesotherapy Devices, Mesotherapy Fillers Kits, Mesotherapy Chemical Peels, and Anti-Aging Masks. In 2024, Mesotherapy Solutions Kits held the largest market share.

When segmented by indication, the market includes Anti-Aging and Wrinkle Treatment, Facial Rejuvenation, Fat Loss, Hair Loss, Stretch Marks, and Acne and Scar Treatment, with Anti-Aging and Wrinkle Treatment leading in market share. In terms of end users, Dermatology Clinics, Hospitals, and Cosmetic Clinics are the primary segments, with Dermatology Clinics holding the largest share in 2024. The route of administration is divided into Injectable and Topical, with Injectables dominating the market. Gender segmentation shows that females accounted for the largest share in 2024.

The outlook for the Asia Pacific mesotherapy market is promising, particularly in emerging economies where economic, social, and cultural changes are creating new growth opportunities. Rising disposable incomes in countries across Asia-Pacific, Latin America, the Middle East, and Africa are leading to increased consumer spending on personal care and beauty enhancements. This trend is further supported by a growing awareness of cosmetic treatments that are non-invasive, cost-effective, and require minimal downtime, making mesotherapy an attractive option.

Countries like China, India, South Korea, and Thailand are experiencing rapid urbanization and a burgeoning middle-class population, which is increasingly exposed to global beauty trends. For instance, in India, the middle class represented 31% of the population in 2023 and is projected to grow to 38% by 2031 and 60% by 2047, indicating a significant market potential for mesotherapy.

South Korea has embraced mesotherapy as part of its beauty culture, particularly the trend towards achieving "glass skin." In 2023, South Korea welcomed over 605,000 foreign patients seeking medical services, with aesthetic treatments comprising a significant portion of these services. The demand for non-invasive procedures, including mesotherapy, is on the rise as patients seek effective alternatives to more invasive surgical options.

In India, the demand for skin whitening and anti-aging treatments is escalating, and

mesotherapy presents a cost-effective alternative to more invasive procedures like facelifts or liposuction. The affordability of mesotherapy treatments allows for a broader demographic to access these services, making it a viable option for many.

China remains the largest market for mesotherapy in the Asia Pacific region, driven by technological advancements, key developments by market players, and supportive regulatory policies. The increasing prevalence of skin diseases and the growing interest in cosmetic procedures are further fueling the demand for mesotherapy in the country. With a significant portion of the population aged 60 and older, there is a vast consumer base interested in aesthetic enhancements, particularly among women.

Overall, the Asia Pacific mesotherapy market is poised for substantial growth, driven by demographic trends, increasing disposable incomes, and a shift towards non-invasive cosmetic procedures. Key players in the market, including Institute BCN Esthetics SL, Mesoskinline ApS, and Galderma SA, are actively engaging in strategies such as product innovation and market expansion to enhance their presence and cater to the growing demand.
