Abstracts

The electrotherapy systems market size is expected to grow from US\$ 4.94 billion in 2024 to US\$ 9.24 billion by 2031; it is projected to register a CAGR of 9.4% during 2025-2031. The growing prevalence of chronic pain and musculoskeletal disorders and increasing geriatric population are noteworthy factors contributing to the expansion of the electrotherapy systems market size. Additionally, the surging popularity of wearable

and portable devices is projected to bring new electrotherapy systems market trends in the near future.

Hybrid therapy systems which combine different modalities to achieve one goal are very much the trend going forward in electrotherapy. The manufacturers are integrating therapeutic techniques such as TENS, NMES, IFC, and ultrasound therapy into single, multifunctional devices. The main motivation for this change is the desire for practical, effective, and patient-centered therapeutic solutions that not only improve treatment results but also facilitate clinical workflows. Apart from clinical versatility, healthcare providers are being put under a lot of stress. Particularly, outpatient and physical therapy clinics have to produce great results within very little time and with limited budgets. Multipurpose devices will reduce the need for multiple separate machines, which, in turn, will save space, lower equipment costs and simplify the training of the staff. For instance, the Chattanooga Intellect Legend XT is a combination of electrical stimulation, ultrasound, and laser therapy in a single platform, eventually, the therapists will be able to shift modalities either use them in a combined treatment program without interruption. This flow of work not only uses a clinic's resources in an optimal way but also makes it easier for treatment to be integrated, documented and monitored. Various manufacturers have come up with portable and user-friendly devices that patients can use at home to continue their therapy work done in the clinic. A device like the Compex Sport Elite is a blend of EMS and TENS features in a small, wearable form, which will be suitable for sportspeople as well as individuals with chronic conditions who need regular, multimodal therapy. It is this great diversity of treatments that assist the patient in sticking to the therapy plan, recovery is hastened and the number of clinical visits made dependent upon is reduced further. Altogether, multi-modal hybrid therapy systems are changing the market substantially in regard to versatility, efficiency, and patient-centric solutions and are expected to emerge as a significant trend in the electrotherapy systems market.

End User-Based Insights

Based on end user, the electrotherapy systems market is segmented into hospitals, clinics, long term care centers, rehabilitation centers, and others. The hospitals segment held the largest electrotherapy systems market share in 2024. Hospitals are the places where people can find medical departments that are dealing with various disease areas such as physical therapy, neurology, orthopedics, rehabilitation, etc. all of these departments are major users of such instruments as electrotherapy appliances. These are TENS units, EMS devices, interferential therapy machines, and pulsed electromagnetic field therapy systems. The main goal of the hospital becomes aligning

with the use of electrotherapy when it is able to facilitate quicker recovery, lower pain, and patient's better movement. Some of the most renowned multi-specialty hospitals like the Mayo Clinic, Apollo Hospitals, and Charit? - Universit?tsmedizin Berlin have already on their way to include electrotherapy devices into their treatment protocols, thus signaling the acceptance and reliance on these technologies. They make significant investments in high-tech electrotherapy equipment to provide patients with minimally invasive treatment options that are used as complements to the traditional medical and surgical approaches. The installation of electrotherapy systems in hospitals is a large part of the story of their technology development, such as portable and user-friendly devices, which make therapy and outpatient treatments easier. Hospitals are increasingly turning to these innovations as they can make the treatment of patients more efficient and can reduce the use of drugs, thus alleviating concerns around the use of opioids and medication side effects, thereby fueling the electrotherapy systems market growth.

The World Health Organization and the Centers for Disease Control and Prevention are among the primary and secondary sources referred to while preparing the electrotherapy systems market report.
