Abstracts

According to our new research study on “EMEA Process Solutions Market Forecast to 2034 –Global Analysis – by Type, Intended Parents, Journey Type, Technology, and Geography,” the market is anticipated to grow from US\$ 10.01 billion in 2025 and is projected to reach US\$ 31.00 billion by 2034; it is expected to register a CAGR of 13.4% during 2026–2034. The EMEA Process Solutions market growth is attributed to advancement of biotechnology and precision medicine increased healthcare spending and better insurance coverage.

The EMEA Process Solutions Market is characterized by the wide variety of technologies employed within different manufacturing steps in the production of pharmaceutical products, which include upstream processing, downstream purification, formulations, and single use manufacturing. The various process solutions available in the market include cell culture media, chromatography products, filtration systems, virus

safety, buffers, transfer bags, and single-use assemblies that aid the development and manufacture of biologics, vaccines, biosimilars, cellular treatments, nucleic acid therapeutics, and many other types of drugs. The process solutions market in EMEA is experiencing significant growth owing to the increase in biologics manufacturing, the growth in the biosimilar manufacturing industry, and the adoption of novel therapeutic methods in the region. Increased spending on the development and expansion of biopharmaceutical manufacturing capacities in Europe, the Middle East, and Africa, together with an increase in the number of CDMOs, is fueling the growth of the market. There is also an increased use of process solutions due to the trend towards more flexible and efficient manufacturing facilities.

As biologics production outsourcing activities continue to grow, the role of contract development and manufacturing organizations (CDMOs) has become critical to the biopharmaceutical supply chain. More pharmaceutical and biopharmaceutical manufacturers are engaging CDMOs to help develop processes, produce drugs in clinical settings, manufacture commercial quantities of biologic drugs, and transfer processes between facilities. These developments will affect the process solutions market for EMEA, because there is need for consumables and process equipment in order to cater to several customers and biologic drug types at once. As opposed to a manufacturing plant that might focus on limited products, CDMOs often handle different products including monoclonal antibodies, vaccines, biosimilar drugs, and cell therapy products within the same facilities. Consequently, significant amounts of cell culture media, chromatographic solutions, filters, buffers, transfer bags, and single-use assemblies get consumed in their operations.

Downstream processing is one of the most capital-intensive processes in the biopharmaceutical industry and consumes a large share of process costs. After completing the upstream process, the manufacturer needs to isolate, purify, concentrate, and formulate the required biological substance, all under tight quality control. The downstream processing process uses highly intensive use of chromatography equipment, ultrafiltration systems, virus safety systems, filtration systems, and buffers. In EMEA, as the demand for advanced biologics, biosimilars, vaccines, and other therapies rises, the need for sophisticated purification and separation processes also grows in importance. With rising demands for purity and tighter regulations, the downstream process has become more complex and thus requires more use of expensive process equipment. This provides a sustainable and regular income stream for the vendors in the downstream segment.

An important aspect about the EMEA process solutions market lies in its reliance on the

continual use of consumable items throughout the manufacturing process cycle. Items such as cell culture media, filtration kits, chromatography resins, buffers, transfer bags, and sampling kits need to be replaced frequently for each new manufacturing cycle. Since the purchases of capital goods tend to be one-off activities, these solutions offer the kind of sustained demand generation related to manufacturing activities. With increased output volumes from biologics and the addition of more manufacturing units, demand for these items will rise correspondingly.

Key insights and analysis of the EMEA process solutions market are derived from leading regulatory authorities, biopharmaceutical industry organizations, and scientific research institutions. These include European Medicines Agency, World Health Organization, International Federation of Pharmaceutical Manufacturers & Associations, European Federation of Pharmaceutical Industries and Associations, and BioProcess International, along with biopharmaceutical manufacturing associations and industry databases. Additional inputs are gathered from company annual reports, investor presentations, regulatory filings, manufacturing facility announcements, scientific publications, and industry conference proceedings. These sources collectively provide reliable information on biologics production trends, biomanufacturing capacity expansions, biosimilar development, vaccine manufacturing activities, adoption of single-use technologies, and advancements in bioprocessing workflows.

6.1.4.1 Overview

6.1.4.2 Single Use: EMEA Process Solutions Market – Revenue, 2021–2034 (US\$ Million)

6.1.4.2.1 Single Use: Process Solutions Market – Revenue, 2021–2034 (US\$ Million)

7. EMEA PROCESS SOLUTIONS MARKET REVENUE ANALYSIS – MODALITIES

7.1 EMEA Process Solutions Market Forecasts and Analysis by Modalities

7.1.1 ADC

7.1.1.1 Overview

7.1.1.2 ADC: EMEA Process Solutions Market – Revenue, 2021–2034 (US\$ Million)

7.1.2 Antibodies

7.1.2.1 Overview

7.1.2.2 Antibodies: EMEA Process Solutions Market – Revenue, 2021–2034 (US\$ Million)

7.1.3 Nucleic Acid

7.1.3.1 Overview

7.1.3.2 Nucleic Acid: EMEA Process Solutions Market – Revenue, 2021–2034 (US\$ Million)

7.1.4 Cell Therapy

7.1.4.1 Overview

7.1.4.2 Cell Therapy: EMEA Process Solutions Market – Revenue, 2021–2034 (US\$ Million)

7.1.5 Plasma

7.1.5.1 Overview

7.1.5.2 Plasma: EMEA Process Solutions Market – Revenue, 2021–2034 (US\$ Million)

7.1.6 Peptides and Proteins

7.1.6.1 Overview

7.1.6.2 Peptides and Proteins: EMEA Process Solutions Market – Revenue, 2021–2034 (US\$ Million)

7.1.7 Small Molecules

7.1.7.1 Overview

7.1.7.2 Small Molecules: EMEA Process Solutions Market – Revenue, 2021–2034 (US\$ Million)

7.1.7.2.1 Small Molecules: Process Solutions Market – Revenue, 2021–2034 (US\$ Million)

7.1.8 Vaccines

7.1.8.1 Overview

7.1.8.2 Vaccines: EMEA Process Solutions Market – Revenue, 2021–2034 (US\$ Million)

7.1.8.2.1 Vaccines: Process Solutions Market – Revenue, 2021–2034 (US\$ Million)
