Abstracts

The Europe acute pancreatitis market was valued at US\$ 1,492.10 million in 2022 and is expected to reach US\$ 2,260.69 million by 2030; it is estimated to grow at a CAGR of 5.3% from 2022 to 2030.

Rising Incidence of Diabetes Following Acute Pancreatitis Fuels the Europe Acute Pancreatitis Market

The pancreas produces insulin, a hormone that regulates blood sugar levels.

Pancreatitis can harm insulin-producing cells of pancreas, which causes diabetes in patients suffering from acute pancreatitis. People suffering from acute pancreatitis are at a twofold greater risk of diabetes as compared to the general population. Diabetes sequelae are observed across the spectrum of severity in acute pancreatitis and can accompany other clinical complications.

As per the European Review for Medical and Pharmacological Sciences, published in 2022, the prevalence of pancreatogenic diabetes is 5–10% in the Western diabetic population, and chronic pancreatitis is responsible for 20% of cases while acute pancreatitis causes 80% of cases. According to an article published in the National Library of Medicine in 2021, ~23% of acute pancreatitis patients are likely to develop diabetes within three years of discharge. Further, an article published in the Journal of Gastroenterology in 2020 states that following acute pancreatitis, ~3%, 7%, 9%, and 11% of patients develop diabetes at 6, 12, 18, and 24 months of discharge, respectively. According to an article published in the MDPI, in 2023, ~40% of patients

with acute pancreatitis are affected by prediabetes and diabetes and are at a higher risk of death and readmission to hospitals than patients with type 2 diabetes. Further, ~ 60.2% of adult patients developed diabetes after acute pancreatitis, and 9% of children after acute recurrent pancreatitis or with chronic pancreatitis, and this risk increases as they age into adulthood. Researchers have noted higher diabetes incidence (~39%) after severe acute pancreatitis than mild acute pancreatitis (14%) in a meta-analysis comparing severe and mild acute pancreatitis. Thus, the increasing incidence of diabetes in patients suffering or recovering from acute pancreatitis contributes to the growth of the Europe acute pancreatitis market.

Europe Acute Pancreatitis Market Overview

The Europe acute pancreatitis market is segmented into Germany, the UK, France, Italy, Spain, Nordic Countries, The Netherlands, and the Rest of Europe. Countries such as Germany and the UK are expected to be the largest contributors to the market in this region. The rising prevalence of acute pancreatitis and increase in alcohol consumption are the major factors driving the market growth in Europe. According to the Federal Statistical Office, health expenditure in Germany amounted to US\$ 460.03 billion in 2019. It is an attractive market for companies offering therapeutic products for acute pancreatitis due to its innovative approach toward healthcare. Medical device manufacturers in Germany can also seek government funding for a variety of research projects and receive grants from the Kreditanstalt für Wiederaufbau (KfW). The increasing focus of manufacturers on new product development and strategic collaborations to develop advanced diagnostic devices such as acute pancreatitis is expected to further propel the market growth in the coming years.
