Technological Advancements for Decapping Specimen Collection Tubes Fuels Europe Decapping System Market

Various companies are developing innovative technologies for decapping of specimen collection tubes. The Pluggo decapper is one example where an automated system is utilized to safely remove stoppers from the standard vacuum blood collection tubes. Additionally, Aim Lab Automation Technologies (Aim Lab), a pioneer in manufacturing specialist laboratory automation robotics, assists in managing a large number of samples before analysis across industrial and pathological laboratories. The company's Tube Decapper Module is an example of technology used to automate the pre-analytical function of decapping a specimen collection tube to incorporate an in-vitro diagnostic (IVD) analyzer or automation system by eliminating complexity. The Tube Decapper Module is fully electric and compact, designed explicitly for decapping a wide range of sample collection tubes comprising screw caps, push-on caps, and conventional rubber bungs that are generally incapable of decapping through commercially available decappers. BD, Greiner, and Sarsedt are a few manufacturers that have decapped tubes from Aim Lab. Such technological advancements will provide lucrative opportunities for the decapping system market during the forecast period.
