Abstracts

The Europe enzymatic DNA synthesis market is expected to grow from US\$ 78.55 million in 2022 to US\$ 727.79 million by 2028. It is estimated to record a CAGR of 44.9% from 2022 to 2028.

Surging Number of Product Launches Fuels Europe Enzymatic DNA Synthesis Market Growth

Advancements in medical technologies and an increase in investments in R&D by manufacturers have resulted in the launch of various modern systems for genetic and molecular biology studies. Companies in the Europe enzymatic DNA synthesis market are involved in different product development activities. In November 2021, OriCiro Genomics Inc. launched the OriCiro Cell-Free Switching system. In June 2021, DNA Script commercially launched its SYNTAX platform with the first product—the SYNTAX System. This system is the first benchtop nucleic acid printer powered by enzymatic DNA synthesis (EDS) technology. The SYNTAX System is a fully integrated, automated printer that synthesizes 96 DNA oligos in parallel, each of length of up to 60 nucleotides,

and delivers them ready for use in molecular biology and genomics workflows, eliminating the need for additional handling. In January 2021, Codex DNA, Inc. signed a strategic collaboration and licensing agreement with Pfizer to access and further develop the novel EDS technology of Codex DNA for its potential application in Pfizer's mRNA-based vaccines and other biopharma products.

Such developments help end users meet the rising demand for technically advanced systems that can efficiently manage data and provide accurate results, thereby boosting the Europe enzymatic DNA synthesis market growth.
