The frozen potato market size is projected to grow from US\$ 67.46 billion in 2023 to reach US\$ 98.02 billion by 2031; it is expected to register a CAGR of 4.8% from 2023 to 2031.

The popularity of potato products such as French fries, frozen hash browns and tater shots has increased in the last few years due to rising demand for frozen snacking and side dish items among the food service channels. Frozen potatoes are widely consumed in quick service restaurants, caf? and bars. They are also available across supermarket shelves and convenience stores. The availability of various brands of products across various retail as well as foodservice channels is expected to boost the frozen potato market growth over the forecast period.

The cold chain, which consists of pre-cooling, refrigerated storage, and refrigerated transport, is one of the pillars of the postharvest handling chain. It is regarded as the backbone of any postharvest industry (developed or developing) and an essential set of technologies for reducing food losses. In addition, cold chain logistics have proven to be a critical necessity for any country seeking to enhance its frozen food market share. Cold chain infrastructure has increased significantly in recent years. For instance, according to the International Institute of Refrigeration (IIR) and the Global Cold Chain Alliance (GCCA) report, the total capacity of refrigerated warehouses globally increased

to 719 million cubic meters in 2020 which is 16.7% greater than the capacity reported in 2018. Major market service providers are constantly improving their technologies to stay ahead of the competition and maintain efficiency, integrity, and safety across the globe. For instance, vendors have implemented Hazard Analysis and Critical Control Points (HACCP) and RFID technology to improve efficiency with smaller shipments. In addition, they are expanding their multi-compartment refrigerated vehicle fleets to provide additional services to consumers. Thus, advancements in cold chain infrastructure are emerging as a lucrative opportunity for the frozen potato market players.

Based on product type, the frozen potato market is segmented into French fries, hash brown, shaped, mashed, battered/cooked, topped/stuffed, and others. The French fries segment accounted for the largest share of the frozen potato market in 2023 and is expected to register the highest CAGR during the forecast period. According to National Geographic, the average American eats nearly 30 pounds of French fries each year. Frozen French fries are available in various sizes and shapes, including thin shoestring fries, curly fries, waffle fries, wedge-cut fries, crinkle-cut fries, and thick steak-cut fries.

Geographically, the frozen potato market is segmented into North America, Europe, Asia Pacific (APAC), the Middle East & Africa (MEA), and South & Central America. In 2023, North America held the largest share of the frozen potato market, and Asia Pacific is estimated to register the highest CAGR over the forecast period. The frozen food industry in Asia Pacific has experienced a huge shift over the years. The development of cold chain infrastructure such as logistics and warehouses is providing strong growth potential to the manufacturers of frozen food to expand their footprints in Asia Pacific. According to National Centre for Cold Chain Development (NNCCD), currently, there are total of 7,645 cold storages in India with 34 million metric tonnes of capacity. Thus, the presence of robust cold storage facilities in the developing Asia Pacific countries is driving the growth of the frozen potato market.
