Abstracts

The interactive display market size was valued at US\$ 11.31 billion in 2022 and is expected to reach US\$ 18.52 billion by 2030; it is estimated to record a CAGR of 6.4% from 2022 to 2030.

The interactive display market is being driven by an increasing demand for digital solutions among consumers. Rising investment by the education industry to support modern education and the growing demand and adoption of interactive displays to develop infrastructure for digital classrooms is fueling the market. For instance, according to the Center for American Progress (CAP), in September 2022, the US spent ~US\$ 1,100 billion on modernizing and replacing outdated school buildings, which, in turn, raised the adoption of interactive displays for education systems. Interactive display helps users improve visualization of content with smart viewing and allows them to display two or more materials at the same time on the same screen.

The growing use of interactive displays in the education sector is propelling the market. The expansion of the education sector encourages market players to develop innovative solutions for easy teaching and learning processes. For instance, in May 2023, LG Electronics Inc. unveiled the LG CreateBoard Interactive whiteboard solution for use in virtual classrooms. This interactive display enables both teachers and students to view or access and provide fluid writing and sketching experience.

On the basis of industry vertical, the market is divided into retail & hospitality, healthcare, BFSI, education, entertainment, and others. The retail and hospitality segment is anticipated to register the highest CAGR in the coming years. The retail industry is expected to witness a rise in demand for touch-enabled displays due to the expanding popularity of touch-based gadgets and an increasing use of interactive tables and kiosks. The growing implementation of interactive kiosks by a number of large retail chains, such as Walmart, is fueling the market for the segment. Interactive kiosks show products together with their characteristics and pricing, which improves customers' in-store experience. The retail sector is anticipated to expand during the forecast period, owing to the rising number of commercial spaces, including malls, museums, departmental stores, and shopping centers. Interactive video walls allow customers to verify the availability of stock at a specific location and glance through the store's inventory, which is anticipated to boost the interactive display market during the forecast period.

The interactive display market analysis is carried out by identifying and evaluating key players operating in the market across different regions. Samsung Electronics Co Ltd, Promethean Limited, LG Electronics Inc, BOE Technology Group Co Ltd, ViewSonic Corporation, Panasonic Holdings Corp, Sharp Electronics Corp, Hitachi Ltd, BenQ Corporation, and SMART Technologies ULC, are among the key interactive display market players profiled in this market study. Several other interactive display market players were also analyzed for a holistic view of the market and its ecosystem.
