Abstracts

Unlike broadcast TV, cable TV, or satellite signals, IPTV (Internet Protocol television) is a service that uses the Transmission Control Protocol/Internet Protocol (TCP/IP) suite to deliver television programming and other multimedia information.

A controlled or dedicated network, such as Digital Subscriber Line connectivity, is frequently used to deliver IPTV content. A private network allows network operators greater control over video traffic than the public internet does. This control enables them to guarantee quality of service, uptime, capacity, and reliability.
