Abstracts

The investor ESG software market size was valued at US\$ 1.08 billion in 2024 and is anticipated to reach US\$ 3.36 billion by 2031. The investor ESG software market is estimated to record a CAGR of 17.6% from 2024 to 2031.

The investor ESG software market in North America is further segmented into the US, The integration of generative AI into investor ESG software is expected to bring new trends into the market in the coming years. With generative AI, investors access, analyze, and interpret environmental, social, and governance (ESG) data. In ESG, this technology can play a pivotal role in enhancing ESG data analysis, reporting, and decision-making processes. One of the most significant benefits of integrating generative AI into ESG software is its ability to automate the creation of complex ESG reports. Generative AI can quickly analyze vast amounts of ESG data from various sources and generate tailored, insightful reports for investors. These reports can include standard metrics and predictive analyses, identifying emerging risks, opportunities, or trends in ESG performance. By automating these processes, investors can save valuable time while ensuring the reports are both accurate and comprehensive.

The integration of generative AI into the investor ESG software will drive significant advancements in data accuracy, reporting efficiency, and predictive analytics. For instance, in July 2024, a Paris-based sustainability platform, CO2 AI, launched Product

Footprinting, a new generative AI-powered solution aimed at supporting companies to compute carbon emissions for products and reduce environmental impact. The platform offers solutions aimed at helping large and complex organizations evaluate impact and detect levers to reduce impact at scale, leveraging artificial intelligence. According to the company, the new solution comes to address a need for more precise and rapid product carbon foot printing, citing a study released by CO2 AI and BCG indicating that only 38% of companies receive adequate product-level data from suppliers. Similarly, in April 2024, Infor, the industry cloud leader, unveiled the launch of Infor GenAI and ESG Reporting, designed to assist customers in enhancing productivity and tracking their environmental impact. Infor's comprehensive suite of modern solutions, including industry-leading ERPs and supply chain tools, supports critical operations across manufacturing, distribution, healthcare, and public sectors. By combining the power of GenAI with unique industry-specific capabilities and insights, these solutions enable customers to efficiently harness the right data and workflows, accelerating value realization. Furthermore, these solutions comply with strict security and data privacy standards reinforced by Infor's OS platform. Additionally, by automating and personalizing ESG data analysis, generative AI will help investors make more informed, sustainable, and future-proof investment decisions, further enhancing the growth and adoption of ESG software in the investment space.

Based on end user, the investor ESG software market is segmented into software and services. The software segment held the largest investor ESG software market share in 2024. Investor ESG software platforms help enterprises achieve better value by optimizing ESG programs and understanding business performance exposure. For instance, EnHelix ESG software is an award-winning subscription-based SaaS application in the financial category. EnHelix can execute ESG reporting and help companies easily translate big data into curated and actionable ESG reputation risk reporting. Further, the software is used by investors and capital market players to evaluate corporate behavior to determine the future financial performance of market players.

MSCI, Workiva Inc.; Morningstar Sustainalytics; London Stock Exchange Group plc; Cority; Prophix Software Inc.; SAP SE; Sphera; FactSet; and Bloomberg Finance L.P. are among the prominent players profiled in the investor ESG software market report. Several other major players were also studied and analyzed in the investor ESG software market report to get a holistic view of the market and its ecosystem.

The overall investor ESG software market share has been derived using both primary and secondary sources. Exhaustive secondary research has been conducted using

internal and external sources to obtain qualitative and quantitative information related to the investor ESG software market. The process also helps obtain an overview and forecast of the market with respect to all the market segments. Also, multiple primary interviews have been conducted with industry participants to validate the data and gain analytical insights. This process includes industry experts such as VPs, business development managers, market intelligence managers, and national sales managers, along with external consultants such as valuation experts, research analysts, and key opinion leaders, specializing in the investor ESG software market.
