## **Abstracts**

The Middle East & Africa acrylic teeth market is expected to grow from US\$ 21.09 million in 2022 to US\$ 31.00 million by 2028. It is estimated to register a CAGR of 6.6% from 2022 to 2028.

Increasing Digitization with CAD/CAM Technology to Propel Middle East & Africa Acrylic Teeth Market

Computer-aided design (CAD) and computer-aided manufacturing (CAM) software helps dentists accomplish complex procedures faster, effortlessly, and accurately. The CAD/CAM technology constructs and repairs dental veneers, crowns, inlays, onlays, and bridges from a single block of ceramics, making the final product more accurate than the product made from conventional fabrication methods.

The technological advancement and the upgrade in materials used in dental treatments proved useful and possible for CAD/CAM-fabricated restorations. Various materials such as ceramic, metal, and composites can be used in restoration manufacturing with CAD/CAM systems. Increasing technological advancements and awareness among a large population fueled the demand for aesthetic procedures with limited visits and stays in dental clinics and hospitals, fueling the acrylic teeth market growth in the coming years.

In recent years, CAD/CAM technology has become an alternative to conventional methods of fabricating removable prostheses. In 1994, the first scientific article discussing the use of CAD/CAM in the fabrication of complete dentures was published. Since then, numerous CAD/CAM denture systems have been introduced. CAD/CAM-fabricated complete dentures have several advantages over conventionally fabricated complete dentures, such as decreased porosity, enhanced predictability of the desired outcomes, and excellent fitting accuracy. As the acrylic used for the fabrication of dentures using CAD/CAM technology is pre-polymerized, the prosthesis contains less residual monomer. It is more hydrophobic than the conventionally processed one, resulting in a more bio-hygienic prosthesis.

Moreover, the CAD/CAM technology guarantees complete recovery within a week with fewer side effects among patients than the conventional method. The approval of this technology in the dental services offered by healthcare professionals, which enhances the patient experience. Thus, the increasing digitization with CAD/CAM technology is likely to propel the growth of the Middle East & Africa acrylic teeth market in the future.
