The Middle East & Africa advanced medical stopcock market is expected to grow from US\$ 94.29 million in 2022 to US\$ 119.25 million by 2028; it is estimated to record a CAGR of 4.0% from 2022 to 2028.

Increasing Prevalence of Chronic Diseases and Rising Geriatric Population Propel Middle East & Africa Advanced Medical Stopcock Market Growth

The growing consumption of tobacco and alcohol, poor nutrition, and the lack of physical activity are among the leading causes of chronic diseases such as heart disease, cancer, chronic lung disease, stroke, Alzheimer's disease, diabetes, and chronic kidney disease. Rapid unplanned urbanization, unhealthy lifestyle adoption, and a rising aging population are a few other factors increasing the risk of chronic diseases. According to the WHO, the rising geriatric population is increasing the incidence of chronic obstructive pulmonary disease, multiple chronic conditions, hypertension, diabetes, depression, and various other diseases.

Moreover, chronic diseases are mostly preventable and treatable at the initial stage of disease. The severity can be avoided by taking a few preventive measures. Further, diabetes is a life-threatening chronic disease with no functional cure. Diabetes can lead to various complications in different body parts and increase the overall risk of premature death. Heart attack, stroke, kidney failure, leg amputation, vision loss, and nerve damage are among the major complications associated with diabetes.

The treatment for chronic diseases includes medication, intravenous therapies, or

surgical procedures. Most chronic diseases are treated with infusion therapy, requiring infusion pumps. An infusion pump is a medical device that delivers fluids, such as nutrients and medications, into a patient body in precise amounts. Medical stopcock is connected to the IV infusion set of an infusion pump. Thus, the growing geriatric population and rising prevalence of chronic diseases drive the growth of the Middle East & Africa advanced medical stopcock market .
