Innovative Product Launches Fuels Middle East & Africa Decapping System Market

Manual decapping consists of repetitive actions/tasks resulting in errors. Also, manual steps of decapping aerosol spray during cap removal can be dangerous for employees as it can cause the contamination of specimens and cross-contamination. Such issues can be minimized through the automated decapping of sample tubes. Therefore, there is an increased demand for automated decapping of sample tubes from clinical laboratories.

ASP Lab Automation company's 'DeCap Pro' is a compact bench-top device intended for the automated decapping of sample tubes. Additionally, the DeCap Pro reduces the possibility of repetitive actions/tasks providing simple operations with efficient and hygienic tube handling for laboratory staff. Further, the device is explicitly designed to be compact and is a reliable alternative for labs in a scenario where throughput is too small and requires complete automation. Thus, automated decapping systems are likely to become a key trend in the Middle East & Africa decapping system market in the

future.
