The Middle East & Africa e-learning market is expected to grow from US\$ 15.43 billion in 2022 to US\$ 23.18 billion by 2028. It is estimated to grow at a CAGR of 7.0% from 2022 to 2028.

Growing Number of Cost-Effective E-Learning Models is Driving the Middle East & Africa E-Learning Market

E-learning models have led to many changes in the educational content accessed, discussed, and shared. It also increases transparency between teachers, students, and parents. E-learning is a cost-effective model, which drives its popularity among parents, who can keep track of their children's daily activities. Moreover, owing to an urge to update existing training programs, many educational institutes consider adding e-learning to the set of existing tools. Due to the increasing development of short-term e-learning models, companies install entire e-learning models for the long term, saving huge amounts on training and development and eliminating major instructor-led training expenses.

E-learning reduces overall training time by 40–60% and helps businesses cut down related expenses, in turn, increasing productivity. With e-learning, users do not need to invest in any special equipment or learning resources for each module of their courses.

Learners log in to an app or a portal at any point, removing the need to spend on textbooks or other course materials. Therefore, an increasing number of cost-effective e-learning models propel Middle East & Africa e-learning market growth.

Middle East & Africa E-Learning Market Overview

The Middle East & Africa e-learning market is segmented into Saudi Arabia, the UAE, South Africa, and the Rest of Middle East & Africa. In the Middle East (ME), traditional academic institutions and newly founded online or hybrid educational organizations are still in the early stages of convincing students and their parents to embrace and adapt to the concept of e-learning. While a few traditional colleges have begun to offer a variety of e-learning courses, others are still in the early phases of establishing such programs. However, the increase in acceptance of e-learning solutions, stress on continuous learning practices by organizations, accountability mandates, and the use of cloud technology to speed up the learning process are a few major factors driving the Middle East & Africa e-learning market across the region.

The Middle East & Africa e-learning market growth is attributed to the rising government expenditure in the education sector to increase the adoption of e-learning platforms. The Government of Saudi Arabia is encouraging e-learning programs to promote quality education. For instance, in February 2022, the Ministry of Education and the Saudi Electronic University inaugurated a forum on the future of learning and technology in Riyadh. The forum was established to adopt e-learning strategies and technologies in the education system across MEA countries. Also, various other institutions are undertaking initiatives to adopt e-learning portals, boosting the demand for e-learning solutions, thus fuelling the Middle East & Africa e-learning market growth. For instance, in May 2020, Microsoft partnered with C-Telecoms, Sahara Net, COMM-IT, Jawraa, Future Nas, and Al-Mayssan Technical Services to provide free half-day training on Teams to academic institutions in Saudi Arabia.
