### **Rising Incidence of Diabetes Fuel Middle East & Africa Glucose Monitoring Devices Market**

Diabetes is a life-threatening chronic disease with no specialized cure. It is mainly caused by the body's inability to produce or effectively utilize the hormone insulin. This inability prevents the body from adequately regulating blood glucose levels. There are two types of diabetes—diabetes type-I (also known as diabetes insipidus) and diabetes type-II (also termed diabetes mellitus). The incidence and prevalence of diabetes are steadily increasing across the world. Type 2 diabetes is the most prevalent form of diabetes and has increased alongside cultural and societal changes. In high-income countries, up to 91% of adults with the disease have type 2 diabetes. According to International Diabetes Federation (IDF), approximately 537 million people were living with diabetes in 2021 and is expected to reach 738 million by 2045 globally.
